TICKET CREATION AND INITIAL DOCUMENTATION

ACE-NH-005 | NEW HIRE ASSIGNMENT 005

A ticket is the authoritative operational record—not merely proof that work occurred.

MISSION Convert an emotional, incomplete support conversation into a clear ticket that another technician can understand, continue, communicate, and eventually resolve or escalate.

Student name	**ACE ID**
Caleb Brandt	CTB
Date	**Role-play / ticket reference**
8/26/26	Pitt IT Student

ACE PRINCIPLE 01 Support starts with understanding the problem, not demonstrating that you know the answer.

STAGE 1 | CAPTURE THE CALL

Record the conversation as it happens. Raw notes may be incomplete, abbreviated, or out of order; they are a capture source, not the finished ticket.

Caller / requester	**Department or location**
Pitt student	Dormitory #3
Contact method	**Workstation / asset information**
Phone	Desktop Computer

Date and time of contact

8/26/2026 11:34 PM

Caller's exact description of the problem

My computer turned off, I'm in tears, all my work is gone!! What do I do!

Raw call notes

Very upset, computer is off, user is worried about work, device is still plugged into power yet will not turn on. Power strip died off aswell, but computer still doesn't plug in when plugged directly into wall either

TRAINING STANDARD Mistakes are acceptable during training. Undocumented work and unsupported assumptions are not.

STAGE 2 | SEPARATE WHAT WE KNOW

Review the raw notes before creating the ticket. Keep the user's report, verified facts, observations, and unverified ideas distinct.

IMPORTANT "The computer will not turn on" is a valid user report. It is not yet a technical diagnosis.

User-reported statements

The user reported that the computer shut off, and will not turn on anymore, they have lost all their work and do not know what to do anymore.

Confirmed facts

Power is still plugged in, user is insistent they did not touch any power cords. Power strip does not light up anymore

Technician observations

I heard a lot of emotion and distress about how the desktop is broken and has seemed to fail according to my user.

Unverified assumptions

PSU failed? Power strip went bad, temporary loss of power

Missing information

To learn more about what they could've been possibly doing prior to the desktop shutting off

Useful follow-up questions

Asking them if they're on a desktop computer or laptop, and how they're connected power wise. Ask if they have power in the room/dorm, try turning on lamps or see if microwave has power etc

Symptom statement for the ticket

Desktop computer shut down without any prior warning

DOCUMENTATION BOUNDARY Never enter passwords, MFA or recovery codes, protected personal information, or unnecessary sensitive details in this worksheet or a ticket.

STAGE 3 | CREATE THE TICKET

Complete the record as though another ACE technician will receive it immediately. Use the closest available category and assess priority from impact and urgency—not emotion, guesswork, or how difficult the issue sounds.

TICKET FIELD	OPERATIONAL RECORD
Ticket number	1234
Date/time opened	8/26/2026 11:34 PM
Requester	Ms. Student
Location	Dormitory #3
Intake channel	Phone
Ticket type	Incident
Category and subcategory	Hardware
Impact	One User
Urgency	Quickly, student is very upset and needs to meet deadlines.
Priority	High
Assigned technician / group	CTB
Current status	In Progress

Concise ticket title

Desktop computer shut off without prior warning

Detailed problem description

User reported desktop shut off without warning, they are worried they have lost all work and are very worried about midterm paper. User reports power strip is off aswell, and desktop still does not power on even when plugged directly into the wall. Monitor will not power on either. Reset button on power strip does not work. User reports that night lamp turned off aswell, but didn't notice due to distress. Power seems to be out on whole floor, so ticket should be updated to multiple users.

Initial technician notes

User is upset, scared for midterm final being wiped. User has reported that the computer broke on them and no longer wants to turn on. Reaffirm user all work is saved if using Microsoft Word

QUALITY TEST A useful ticket lets a technician understand the problem without replaying the original conversation.

STAGE 4 | DOCUMENT THE WORK

Record actions and observations in the order they occurred. This assignment assesses information gathering and documentation; you are not required to diagnose or repair the computer.

TIME	ACTION OR QUESTION	RESULT OR RESPONSE	TECH INITIALS
11:34	Asked for contact information	User gave me phone number	CTB
11:37	Asked if user had kicked power strip	User said no, and said the power strip doesn't turn on anymore	CTB
11:40	Asked user if power was on in room, A.C turned off, lamps turned off etc	User said lamp turned off and will not turn on anymore either	CTB
11:42	Asked user to call back in the morning when power was back to resolve issue and help them get their work back	User affirmed they will call back from the same number they called from the first time	CTB

Troubleshooting already attempted
Trying different power outlets, wiggling power cords

Information still needed
Confirm if roommates or other dorms on the floor are having the same issue

Related knowledge article
None Found

Current working assessment
No power in the room, contact facilities and then get the student back in call with me and report the issue is resolved.

Recommended next action
Hold off on the power to kick back on, and for the student to contact me again.

STAGE 5 | PREPARE THE HANDOFF

Select one next step and justify it in the ticket record:

☐ Continue investigating ☐ Resolve the ticket ☐ Escalate the ticket ☑ Await additional information

Decision justification
No escalation is needed for another technician, just need to wait for user to report back and help them with any leftover issues

Technician Handoff Summary
In one professional paragraph, state what the user reported, what is confirmed, what was attempted, what remains unknown, and what the next technician should do.
User reports desktop is turned off, confirmed that it will not power on, we attempted to switch the power strip on and off, moved power cable from strip to the wall. Unknown is the specs of the computer, but they are not quite useful for this situation as nothing seems to have failed. Next technician, which will be me as there is no escalation should confirm power for the desktop, confirm file is still there, and has the content inside.

PEER QUALITY CHECK | Could another technician continue this work using only this ticket?

☐ Clarity — The title and description are concise, specific, and searchable.
☑ Completeness — The record contains enough context for another technician to begin.
☑ Chronology — Actions, questions, observations, and responses appear in time order.

- ☑ Professionalism — The tone is objective, respectful, and free of blame or sarcasm.
- ☑ Assumptions — Unverified ideas are labeled; symptoms are not presented as diagnoses.
- ☑ Privacy — No password, code, protected personal information, or unnecessary sensitive detail appears.
- ☑ Next action — The status, owner, missing information, and next required action are clear.

ACE DOCUMENTATION STANDARD | CLEAR. VERIFIED. CHRONOLOGICAL. READY FOR HANDOFF.
